HydroElite V5 VENI

The modernisation solution for hydraulic lifts

HydroElite V5 VENI is a drive and control system for hydraulic lifts, enabling energy-efficient and sustainable modernisation. HydroElite V5 VENI offers a cost-effective solution for standard installations.
- Pre-assembled and function tested in factory
- Unique servo valve for increased capacity and comfort
- Direct approach to floor without slow speed
- Self learning and self adjusting
- Delivery in up to 5 days (express)

🍃 Energy

- Up to 50 % energy savings
- Up to 40 % lower power demand

Standard measurements | VENI 230L

HydroElite V5

Sustainable lift
Reducing energy consumption up to 50%

Superior installation
Reduced installation time

Unique technology
Unique servo valve

Short lead time
Delivery in up to 5 days (express)

HydroCloud connection
Connect V5 to HydroCloud with our IoT-kit

HydroElite V5 VIDI

The modernisation solution for hydraulic lifts

HydroElite V5 VIDI is a drive and control system for hydraulic lifts, enabling energy-efficient and sustainable modernisation. HydroElite V5 VIDI is the option for maximum energy savings.

- Direct approach to floor without slow speed
- Self learning and self adjusting

When to choose VIDI:

1. HydroElite VIDI reduces the power demand dramatically by lowering the upward travel speed at higher loads. Thus, it can lower fixed costs for the property owner.
2. In high traffic applications where the energy consumption is high, the inverter drive in combination with the air-cooled IE3 motor will lower the operating costs and reduce the need for an oil cooler.

Up to 70 % lower energy consumption and power demand*
